

PINTO GREY **STAGE PLOT**

NOTE:

The In-Ear Monitor systems, *IEM, used by the singer and the drummer are their first choice, which means **IT'S NOT A SHOW STOPPER**, but it's highly preferred and the lack of it might impact on the performance. If it's not possible to feed monitor signals for both, then **the singers IEM is priority!** Both can still perform with wedges. *If you need to pull the plug on the wedge monitor, towers or even side fills to feed the IEM it's ok since they prefer the In-Ear Monitors over speaker monitors. But, if possible, run both systems and the speaker monitors will act as fillers and as an active backup system.*
